

SIQURA PROFESSIONAL DISINFECTANT & PROTECTANT SYSTEM

DISINFECTS & PROTECTS FOR UP TO 90 DAYS

SIQURA™ Professional Disinfectant & Protectant System is a simple and effective way to kill microbes and protect surfaces. It eliminates odour-causing bacteria and inhibits mould and mildew.

Professional use concentrate and ready to use commercial and hospital grade spray, suitable for use ULV Fogger and other spray applications in commercial and domestic premises.

up to 90 days
continuous
protection

kills up to 99.999%
of pathogenic
microbes

inhibits mould
& odour

bonds to
most surfaces

SIQURA PROFESSIONAL DISINFECTANT & PROTECTANT SYSTEM

PRODUCT BENEFITS

Siqura is an Australian owned and made technology that provides double action protection. Firstly, with the initial flash kill of up to 99.999% of microbes and secondly, by creating a charged single molecule surface matrix for ongoing protection. Lasting 30 days on hard substrates and 90 days on porous substrates. Siqura is alcohol free and partially derived from coconut oil, allowing it to be made without harmful chemicals, so that at the end of its life it breaks down into natural, organic compounds.

HOW SIQURA WORKS

The active ingredient in SIQURA is an antimicrobial derived from coconut oil that is grafted onto a molecular adhesive. It's this adhesive that keeps the antimicrobial in place, helping to protect surfaces for much longer periods of time. The antimicrobial component of SIQURA is like a tiny electrical spear. When a microbe comes in contact with the spear a very small electrical interaction occurs. Unlike some antimicrobials that poison the microbe, it's this electrical interaction that kills the microbe, rather like a pin popping a balloon. No poison, no alcohol, just a simple electrical charge that remains on the surface, keeping it protected, longer.

KEY ACTIVE INGREDIENTS

Octadecylaminodimethyltrimethoxysilylpropylammoniumchloride

Alkyl dimethyl benzyl ammonium chloride

Didecyldimethylammonium chloride

Ammonium Chloride is recommended by the Australian Department of Health for effectiveness against COVID-19

SURFACES

Equipment - Electronic touch screens, furniture, workstations, tools and machines.

Touch Points - Door handles, lift buttons, touch screens, handrails and benches

Surfaces - Plaster, stainless steel, timber, laminated, painted

Floors - Carpet, tile and Grout, vinyl and concrete

Fabrics - Furniture, curtains, upholstery

Vehicle Interiors - Cars, trucks, buses and public transport

PROFESSIONAL APPLICATION

Maximise efficacy • Minimise risk of damage • Regular service options

APPLICATIONS

hospitality

childcare

health and aged care

education

gymnasiums

food preparation

animal care

general household

public transport

office settings
